

Supplementary Figure 1. HPLC/UV records of polyisoprenoid alcohols isolated from *in vitro* cultures of (a) *Withania samnifera*, (b) *Platycodon grandiflorum*, (c) *Taxus x media* var. *Hicksii* Rehd, (d) *Ocimum sanctum*, (e) 4 week-old suspension culture of *Taxus baccata*. Clasps indicate the chain-length of dominating polyisoprenoid alcohols - dolichols (a-d) or polyprenols (e) accompanied by their non-separated counterparts - polyprenols (a-d) or dolichols (e).
